DSGVO & EU AI Act Compliance Audit Report

Period: 2026-08-01 — 2026-08-31
User Hash: sha256:sample-deadbeef
Generated: 2026-08-22 21:46:08 UTC

Executive Summary

Metric	Value
Total Calls	25
Pii Detections	24
Blocked Actions	5

Test Status

Metric	Value
Passed	0
Failed	0
Skipped	0
Total	0
Coverage	not measured

Token Mappings

No token mappings stored for the selected period.

Detection Events

Timestamp	Severity	Event	PII Types	Session Hash	Mode
2026-08-15 08:00:00 UTC	high	blocked_action	email	sess-0000-aaaaaa	limited
2026-08-15 13:00:00 UTC	high	blocked_action		sess-0005-aaaaaa	limited
2026-08-15 18:00:00 UTC	high	blocked_action	email	sess-0010-aaaaaa	limited
2026-08-15 23:00:00 UTC	high	blocked_action	phone	sess-0015-aaaaaa	limited

Timestamp	Severity	Event	PII Types	Session Hash	Mode
2026-08-16 04:00:00 UTC	high	blocked_action	email	sess-0020-aaaaaa	limited

Mode Changes

No mode changes recorded for the selected period.

EU AI Act Article Mapping

Article	Title	Compliance Evidence
art_9	Article 9 — Risk Management System	High-risk events and blocked actions are evidence that the system identifies and mitigates
art_11	Article 11 — Quality Management	PII detection rate, bucketed counts, and model/mode metadata demonstrate systematic qu
art_12	Article 12 — Record-Keeping / Logging	Every audit event is logged with a timestamp, session hash, and runtime context to provide
art_14	Article 14 — Human Oversight	Approval and human-review events document that meaningful human control is exercised

DSGVO Article Mapping

Article	Title	Compliance Evidence
art_25	Art. 25 DSGVO — Data Protection by Design and by Default	Privacy Shield pseudonymises PII before it leaves the local trust boundary, implementing t
art_32	Art. 32 DSGVO — Security of Processing	AES-256-GCM encrypted mapping tables, bucketed audit logs and Ed25519-signed report
art_35	Art. 35 DSGVO — Data Protection Impact Assessment	Detection event severity, mode-change history and compliance article mapping provide evi

Report Integrity

SHA-256 canonical report hash:
`951dab6b3e2b15652857a3b3a02f5acd74aba7008126cc6f89343cc064bd199a`
The SHA-256 hash is computed over the canonical, sorted, JSON-serialised report payload. Re-running the export on the same source data yields the same hash. The Ed25519 signature proves that this exact report was produced by the holder of the corresponding private key.
